

**These benefits are the cornerstone of our in-office, 3D mammography center - allowing every patient the ability to have their mammogram performed at the same time and location as your annual exam.**

**Convenience**

Our in-office 3D mammography service allows you to have your annual screening mammogram as part of your annual Well Woman exam or during any appointment. This allows the convenience of one location, with results that go directly to your doctor.

**Privacy and Comfort**

Our mammography suite offers comfort, discretion, and modesty. We work with one patient at a time. There is no sitting in a crowded waiting room while partially disrobed or the need to walk through a common/public area(s). Our changing rooms are spacious, clean and just steps away from our state-of-the-art equipment.

**Continuity of Care**

Your mammography is monitored by your doctor – in the same location your medical records, reports, and images are maintained and managed. If any follow-up work is required from a screening mammogram, our physicians are informed and monitor your progress through any additional steps that are required.

**Board-Certified Radiologists (*Breast Care Specialists*)**

We work with only the most highly credentialed breast care specialists who interpret all of the mammograms performed in our suite. They meet our exacting standards in terms of education and experience in breast health imaging and interpretation. Exam results are most often available to your physician within 48 hours

**Reliability**

Our mammography suite offers the very best 3D mammography equipment and peripherals available in the market today. It is manufactured by one of the few global leaders in women’s health technology and has an exceptional and consistent record of performance and clarity.

**Did you know...**

Major healthcare organizations like the American Cancer Society, American College of Radiology, American College of Obstetrics and Gynecology, and Susan G. Komen for the Cure advise that every woman over age 40 (or earlier with family history of breast cancer) have an annual screening mammogram.

A screening 3D mammogram greatly increases chances of detecting most anomalies at their earliest stage. That’s why our practice subscribes to these recommendations and offers in-office 3D Mammography to all of our patients.

The chance of being diagnosed with breast cancer increases with age - 1 in 8 women will be diagnosed with breast cancer in her lifetime.
